Driving Licence Eyesight Report Form

To drive you must meet certain medical fitness standards. For this purpose vehicles are classed as Group 1 and Group 2. If you are applying for a vehicle in both Groups (See note 2 overleaf) please tick Group 1 and 2 on this form. Where an applicant meets the medical criteria for Group 2 vehicles, they will automatically meet the medical criteria for Group 1 vehicles.

Please have your medical practitioner or optometrist initial any alteration or change made in completing this form. This is important in assessing the validity of the document presented.

Driving Licence Eyesight Report Form

EXPLANATORY NOTES

1. For medical fitness standards vehicles are classed as being in Group 1 or Group 2. The Table below describes which vehicles are in Group 1 and in Group 2. Further information on each licence category can be found on the licence application form.

3. Group 1 Vehicles, Guidance for Medical Professionals the following applies:

A. Licensing may be considered in exceptional cases where the visual field standard or visual acuity standard cannot be met; in such cases the driver should undergo examination by a competent medical authority to demonstrate that

The eyesight examining doctor or optometrist must certify that this condition of monocular vision has existed for a sufficiently long time to allow adaptation and that the field of vision in this eye meets the requirement laid down in paragraph (B).

E. After any recently developed diplopia or after the loss of vision in one eye, there should be an appropriate adaptation period (of at least six months), during which driving is not allowed. After this period, driving is only allowed following a favourable opinion from the eyesight examining doctor or optometrist.

- **2.** The following is general guidance for the medical or optical professional carrying out the eyesight test. This advice will be superseded by guidance set out in the Sláinte agus Tiomáint document which represents the most up to date information on medical fitness standards for drivers in Ireland. All applicants for a driving licence shall undergo a visual acuity and confrontation visual field examination to ensure that they have adequate eyesight for driving power-driven vehicles. Where there is reason to doubt that the applicant's vision is adequate, he/she shall be examined by a specialist (an ophthalmologist, or other medical practitioner with a special interest in defects of eyesight or optometrist). At this examination attention shall be paid, in particular, to the following: visual acuity, field of vision, twilight vision, glare and contrast sensitivity, diplopia and other visual functions that can compromise safe driving.
- there is no other impairment of visual function, including glare, contrast sensitivity and twilight vision. The applicant should also be subject to a positive practical test.
- **B.** The person shall have a binocular visual acuity, with corrective lenses if necessary, of at least 0,5 (6/12) when using both eyes together. The horizontal visual field should be at least 120 degrees, the extension should be at least 50 degrees left and right and 20 degrees up and down. No defects should be present within a radius of the central 20 degrees.
- **C.** When a progressive eye disease is detected or declared, driving licences may be issued or renewed subject to the applicant undergoing regular examination by a competent medical authority.
- **D.** A person who has total functional loss of vision in one eye or who uses only one eye must have a visual acuity of at least 0,5 (6/12), with corrective lenses if necessary.

4. Group 2 Vehicles, Guidance for Medical Professional the following applies:

- **A.** The person shall have a visual acuity, with corrective lenses if necessary, of at least 0,8 (6/7.5)in the better eye and at least 0,1 (6/60) in the worse eye. If corrective lenses are used to attain the values of 0,8 (6/7.5) and 0,1 (6/60), the minimum acuity must be achieved either by correction by means of glasses with a power not exceeding plus eight dioptres, or with the aid of contact lenses. The correction must be well tolerated. The horizontal visual field with both eyes should be at least 160 degrees; the extension should be at least 70 degrees left and right and 30 degrees up and down. No defects should be present within a radius of the central 30 degrees.
- **B.** A learner permit/driving licence should not be issued to a person who suffers from impaired contrast sensitivity or from diplopia.
- **C.** After a substantial loss of vision in one eye, there should be an appropriate adaptation period (of at least six months) during which the person is not permitted to drive. After this period, driving is only permitted following a favourable opinion from the eyesight examining doctor or optometrist.
- 5. More information about medical fitness standards is available on the www.rsa.ie website under the driver licensing tab.
